

An met'antalab, ¿Jant'ey a exlal?: Evaluation of an educational intervention for indigenous adolescents about the level of knowledge on the human papillomavirus

Anaí Domingo-Martínez, Verónica Gallegos-García veronica.gallegos@uaslp.mx, Lucas Gomez-Tobon

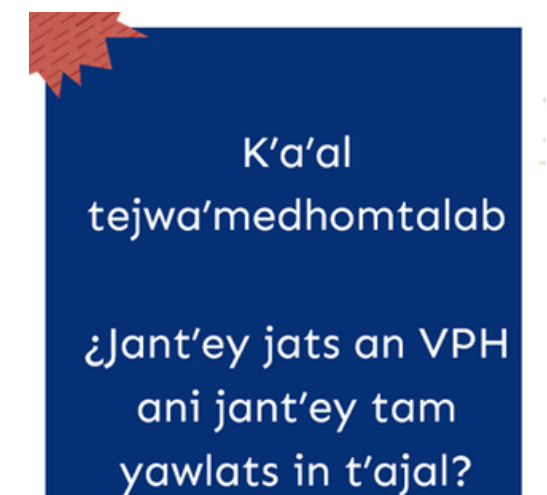

1 Introduction

In San Luis Potosí, the average age of sexual initiation is 15 years in indigenous adolescents, where misinformation about the human papillomavirus (HPV) leads to risk-taking behaviors to get the virus. Therefore, an educational intervention in the Tének language can reduce the language barrier in the indigenous population, promoting health awareness.

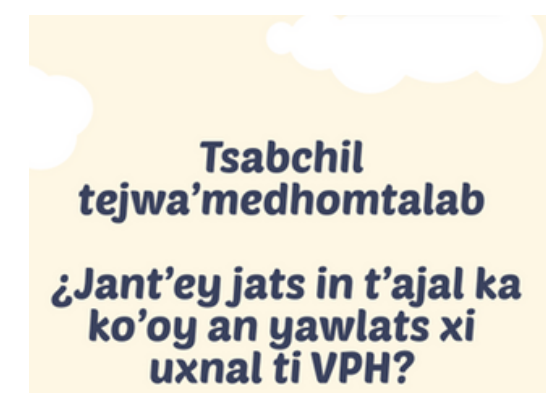

4 Educational intervention

Intervention materials

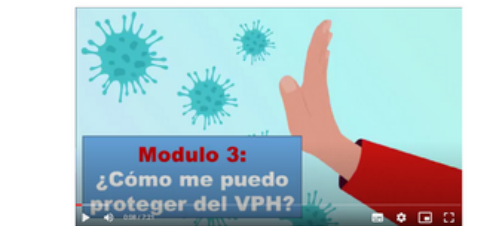

Session 1 translated to Tének

Session 2 translated to Tének

Session 3 translated to Tének

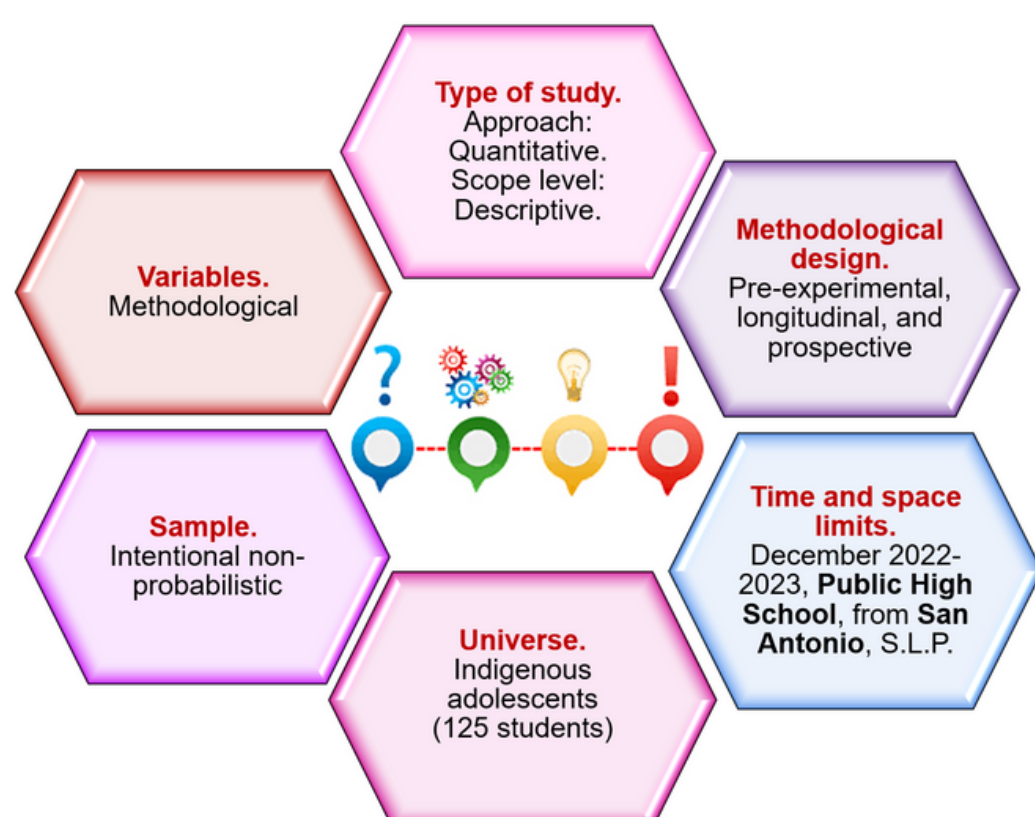

Videos

2 Objective

Evaluate the impact on the level of knowledge about HPV of an educational intervention in the Tének language for indigenous adolescents in a public high school in San Antonio, San Luis Potosí.

3 Methodology

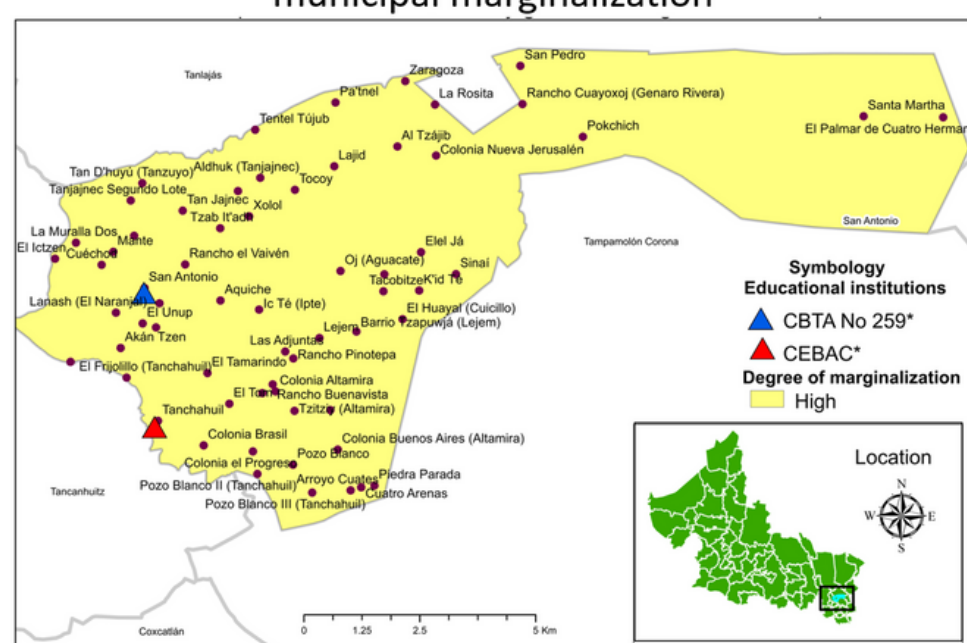

An educational intervention consisting of 3 sessions will be carried out, and an evaluation of knowledge before and after the educational intervention will be conducted.

5 Results

The approved protocol is in place, the letter of intent has been signed and stamped, and there is informed assent as well as a translated and reviewed instrument. The module presentations have been translated into the Tének language, and the translation of the videos is in progress, as well as their review by expert reviewers. A spatial distribution map was made in ArcMap 10.8 software

Spatial distribution of educational institutions in the municipality of San Antonio, S.L.P., and degree of municipal marginalization

*Population for the pilot test: Technological Agricultural High School No. 259 (CBTA No. 259)
*Population for the study: Community High School (CEBAC)
Source: National Commission for the Knowledge and Use of Biodiversity, National Statistical Directory of Economic Units (DENEUE), INEGI 2022. Spatial distribution of educational institutions for the pilot test and for the study, and degree of marginalization of the municipality of San Antonio, S.L.P. Own elaboration.

6 Conclusion

The adolescents will have information about HPV in their native language, which will promote responsible sexual practices, timely identification, and diagnosis to reduce potential HPV complications.
