INTRODUCTION

The worldwide incidence of cancer related to the Human Papilloma Virus (HPV) is high. High risk HPV infection is responsible for 5% of all cancers worldwide (1). In 2018 there were 570 000 women diagnosed with Cervical Cancer (2). Cancers that are originated by HPV can be localized at cervical, larynx, anus or penis level. This is why health promotion is important, specially among vulnerable groups, such as the young and indigenous populations. It has been reported that language can be a barrier for health access (3).

OBJECTIVE

To evaluate the level of knowledge about HPV in a Nahuatl speaking indigenous population after an educational intervention.

METHODS AND MATERIALS

Quantitative

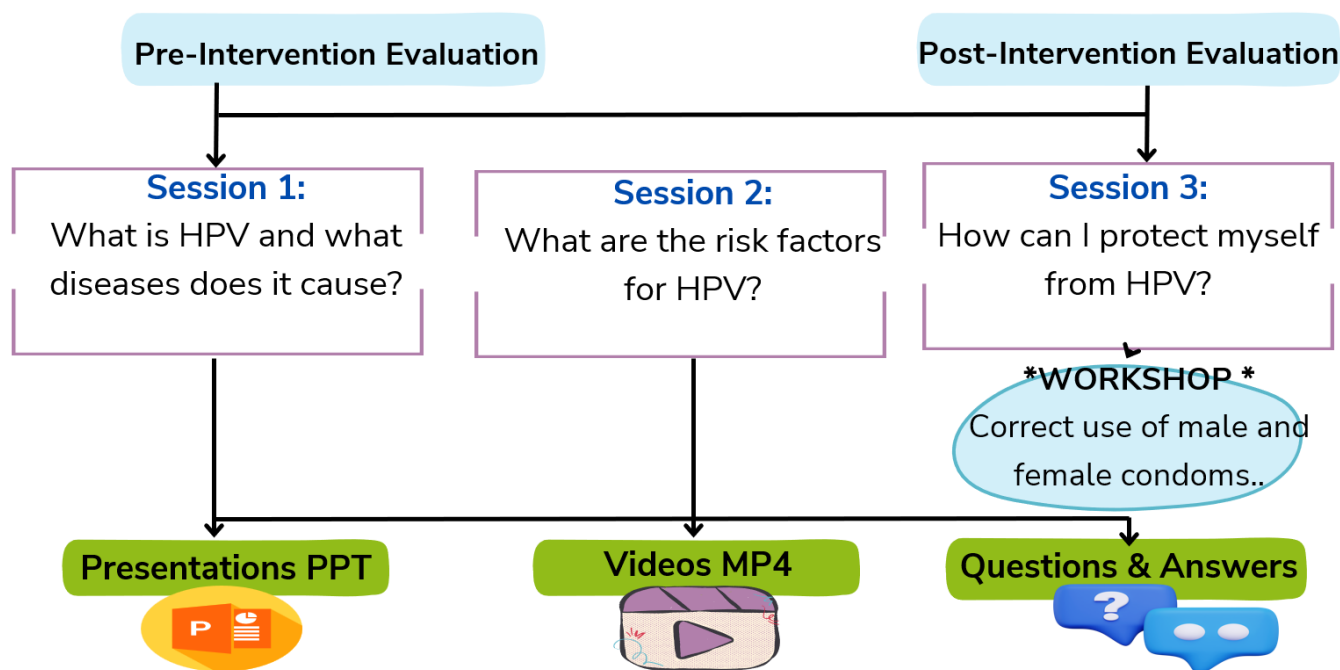

Cuasiexperimental

Longitudinal

Prospective

The intentional sample will be conformed by nahuatl speaking indigenous students enrolled at a public university of Matlapa, San Luis Potosí.

There will be two evaluations, one before and one after the educational intervention. Each evaluation will consist of an instrument with 30 items to asses HPV related knowledge.

For the Statistical Analysis, Descriptive Statistics will be used. And an Inferential Statistics T Student test for paired samples, through SPSS version 18.

PROGRESS

We have the educational intervention guide, the instrument for data collection, the materials we will use in the intervention (see table 1) and the informed consent documents already translated to the Nahuatl language.

The instrument for data collection in Spanish has an Crombach Alpha of 0.612 (4).

Table 1: Support material for the educational intervention sessions.

MATERIAL	NAME	FORMTO	EXTENSION
Video	What is HPV and what diseases are there? Causes?	.MP4	Maximum 10 minutes
Video	What are the risk factors for HPV?	.MP4	Máximo 10
Video	How can I protect myself from HPV?	.MP4	Maximum 10 minutes
Presentation	What is HPV and what diseases does it cause?	.PPT	30 minutes
Presentation	What are the risk factors for HPV?	.PPT	30 minutes
Presentation	How can I protect myself from HPV?	.PPT	30 minutes
Workshop	Correct use of male and female condomso	Practical	30 minutes

CONCLUSIONS

The educational intervention will favour the acquisition of knowledge in young populations, which will allow them healthy practices against HPV.
