

Apptism: Navigating Autism Detection with a Mobile App

Yasmin Cruz Cruz, Graduate Student at Instituto Tecnológico de Orizaba, México. Dr. Eduardo Roldán Reyes, Dr. Guillermo Arriola Carrera, Dr. Victor Castillo Intríago, Dr. Fernando Aguirre Y Hernández/ Enlace Autismo A.C

A.

Introduction

Early and accurate diagnosis of autism is crucial for providing proper support and improving the quality of life for individuals within the spectrum. Mobile applications and data analysis have become powerful tools in this regard. In this work, we developed AppTism, which facilitates access to early detection by integrating the Mexican questionnaire currently used to identify autism in infants. As we gather more user information, we aim to enhance the process of recommending the most suitable healthcare providers, considering factors such as location, availability, specified conditions, and available resources to create a more robust support system.

B.

Objectives

- Enhance accessibility to early autism detection, particularly benefiting underserved communities with limited access to healthcare providers.
- Foster the creation of a supportive community to provide emotional and practical assistance for individuals and families touched by autism.

C.

Design and Workflow

Prototype design using the Mexican questionnaire

Testing and deployment

UI/UX Design:
Canva, Flipsnack, AppyPie

D.

Challenges and Opportunities

- The proliferation of mobile devices can improve healthcare accessibility for remote or underserved communities, but technological literacy can hinder their effective use.
- The mobile application must comply with health and data privacy regulations in each country of use to prevent unauthorized access to user information.

E.

Future Work

- As we collect user data, we aim to create machine learning algorithms that uncover detection patterns not captured by the Mexican questionnaire.
- We plan to incorporate a specialist list into the database to schedule appointments within a user's geographic location easily.
