

ENCOURAGE the participation of women and young students from PURHÉPECHA communities in Earth and Space Science

Elsa Sánchez García

Universidad Nacional Autónoma de México, National Space Weather Laboratory (LANCE)

1. Introduction

The participation of indigenous women and students in the STEM areas is not usual and sometimes is limited due to lack of teaching and/or technological materials, financial resources, motivations and specialized instructors.

2. Research Question

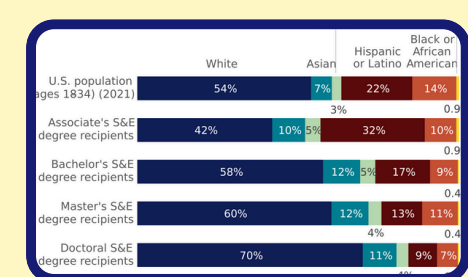

- Can indigenous women participate in the Space Sciences?
- How can we share the scientific knowledge with the indigenous students?
- How can we push up their interest to the science?

3. Previous research

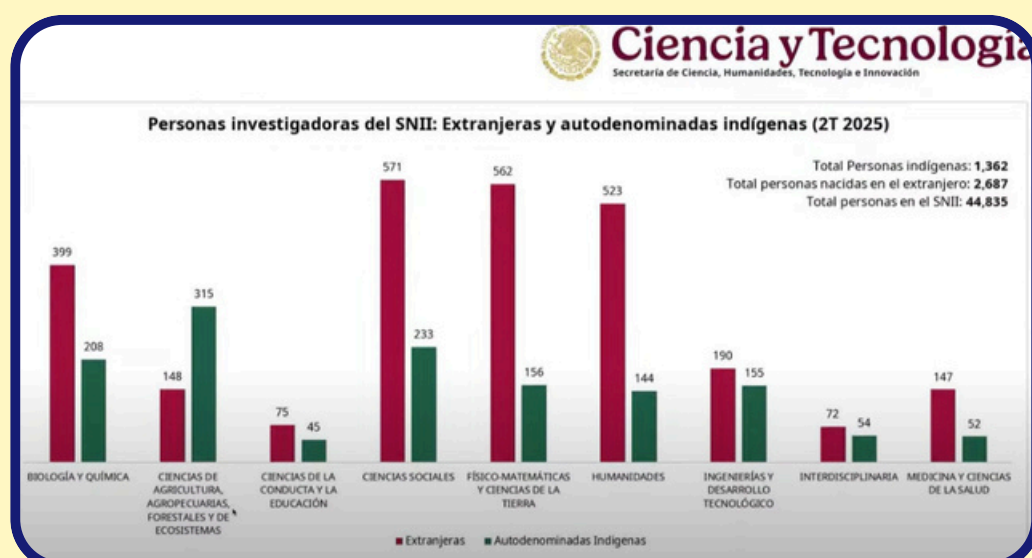

Female researchers in Latin America and degree obtained by level, race and ethnicity

33% of research are female
Credit: UNESCO Institute for Statistics, Junio 2019

Academic degree obtained by indigenous students

0.94 % of indigenous scientists belong to the National Researchers System

4. Methodology

- Encourage the participation of people from Purhépecha communities in sciences through conferences, workshops and scientific activities.
- Promote the opening of work spaces for young indigenous university students.
- Motivate, inform, and help young indigenous university students in their academic training.

5. Suggestions with EAAMO

- Develop digital material related to Earth and Space Sciences to share with indigenous schools and students: infographies, worksheets, videos, audios, games and board work.
- Material will be available online for interested persons.
- The content language will be in Spanish and Purhépecha.
